

PROGRESSIVE SWEDISH DENTAL HYGIENISTS

150 PUBLICATIONS IN INTERNATIONAL DENTAL SCIENCE JOURNALS

The overall aim with research performed by dental hygienists is to support evidence based oral health promotion. A variety of quantitative as well as qualitative research methods is used in studies on different populations and age groups. The research performed by Swedish dental hygienists has so far resulted in about 20 dental hygienists with a PhD degree and more than 150 publications in international peer reviewed journals. Several perspectives of oral health are studied in relation:

- general disease
- stress
- microflora
- salivary factors
- dental materials
- quality of life
- psychosocial/behavioral aspects
- elderly frail individuals
- tobacco
- epidemiology and public oral health
